

Design, Storage & Compliance in Clinical Environments

New programme starting from July 2021 – essential for everyone involved in clinical design

“Premises where care and treatment are delivered are clean, suitable for the intended purpose, maintained and where required, appropriately located, and that the equipment that is used to deliver care and treatment is clean, suitable for the intended purpose, maintained, stored securely and used properly. Providers retain legal responsibility under these regulations.”

Health & Social Care Act 2008 (CQC)

Design within clinical environments presents Healthcare Project Managers and Planners with many challenges, from understanding storage needs and defining workflow practices to identifying regulatory requirements and managing budgets.

With over 20 years leading the way in clinical storage design, development and implementation, we are in a position to share our vision and experience within this very unique sector.

For 2021, we have created a new tailored CPD programme to help you get it right the first time.

Kevin Glass, Managing Director

Introducing the NEW 2021 CPD programme

The new 2021 CPD programme from Stirling Medical & Scientific Ltd is available from July 2021 and can either be presented face to face in clinical environment surroundings at our Sidcup Design Studio, at your premises, or via Microsoft Teams/Zoom conferencing facilities if preferred.

Looking to discuss a particular project?

We can customise your CPD based on your needs

CPD programme 2021

HTM71 & HTM63

Infection Prevention by Design

Medical Storage & Design Issues

Clinical Workflow & Effectiveness

Modernising Healthcare Environments

Materials & Specifications

Q&A

Quotations from NHS Estates and Capital projects teams and Architects

“Great presentation and material”

“Engaging and relevant”

“Well delivered information”

“Great presentation with detailed information provided”

Our speakers have experience on projects spanning multiple clinical settings
