

2026 Systeméd furniture colours

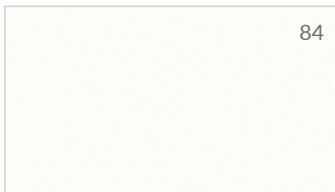

The Systeméd furniture colour range has been updated to reflect current trends in healthcare environments. Colours are available across several material ranges and are arranged into six colour groups.

Stock HP laminate worktops match the Group 1 colours and are available to order in other colour groups at additional cost.

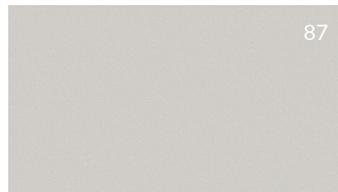

The Light Reflective Value (LRV) is shown top right.

Colour Upgrade Styles

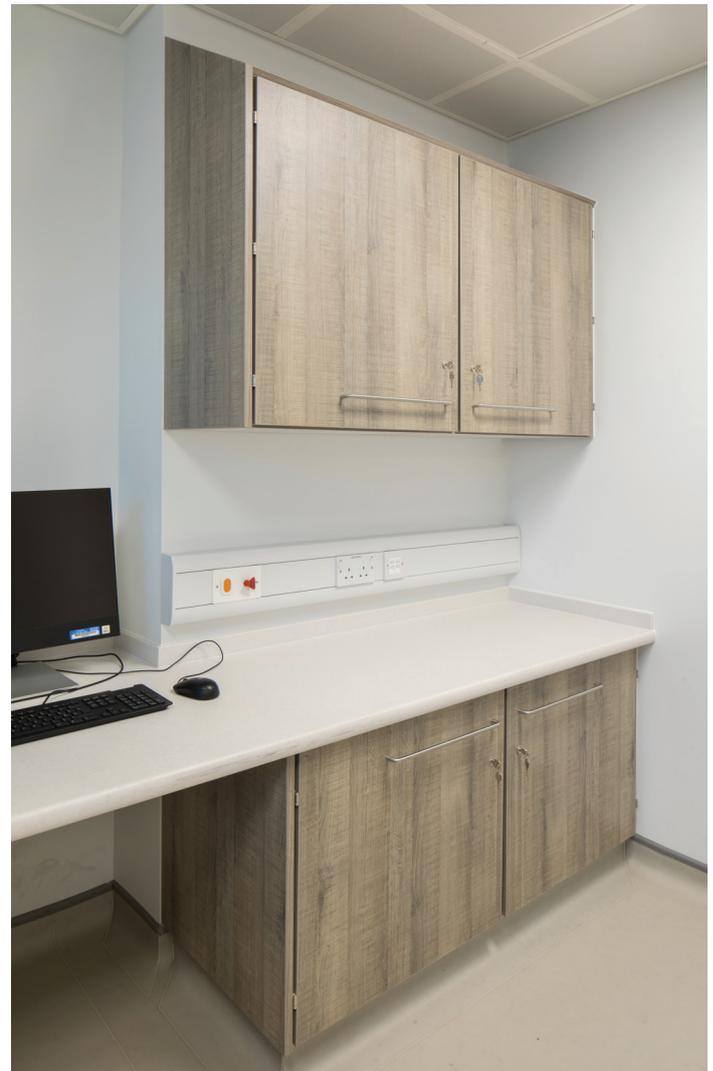

The use of colour in healthcare environments offers numerous benefits. It can enhance patient well-being by creating a calming atmosphere, reducing stress and anxiety. Specific colours, like soft blues and greens, are known to promote relaxation and healing while bright, cheerful colours can improve mood and create a more welcoming environment. Colour coding can also aid in organisation and efficiency, helping staff quickly identify different areas and supplies.

Upgrading your healthcare furniture to one of the two styles below not only makes your space more visually appealing but also enhances functionality, contributing to a more pleasant healthcare experience.

Doors only décor (style A)

Colour layout style A has just doors and drawer fronts coloured. This is the most economical way of creating an uplift for an overall effect when compared with standard White or Clinical Light Grey units. Plinth colours available in White or Clinical Light Grey to match carcass colour

Full exterior décor (style B)

Colour layout style B involves additional cost uplift and includes matching colour fillers, end panels and sloping tops. White carcasses can also be supplied with the front edges of the cabinet lipped in colour matched edging if required. Plinth colours available in White, Clinical Light Grey or Brushed Steel effect.
